

io a support

Good evening,

I'm evaluating Alzex Finance as a more complete alternative to AceMoney.

I'm trying the "personal budget" functions and there is a behaviour that seems like a bug to me, but it is more likely that I've misunderstood something.

The function discussed in the 11th point of your "Edit budget entry" guide's page (<http://www.alzex.com/help/budget-edit.html?ms=QwBcFxA=&mw=MzAw&st=MA==&sct=NDC3>) is very fundamental to me. This is the point that I'm experiencing problems with.

There are two ways to track budget. Each period is independent and amount of expenses at the beginning of the period is always the same - previous values are ignored. When the "Include previous values" option is enabled, any over expenditure or money saving for the previous period is included in the next period and amount at the beginning of the period can be reduced or increased. Select the number of periods to be included.

I need to use the "include previous values" option but it seems to me that the number of periods is not being taken into account.

Please look the following screenshot (translation: giovedì 1 dicembre 2016 > thursday 1 december 2016, giovedì 30 novembre 2017 > thursday 30 november 2017). In the first month there is an overexpenditure. In the following ones there is a constant growth of the remainder but I expect this to be shown instead:

Period - Remainder

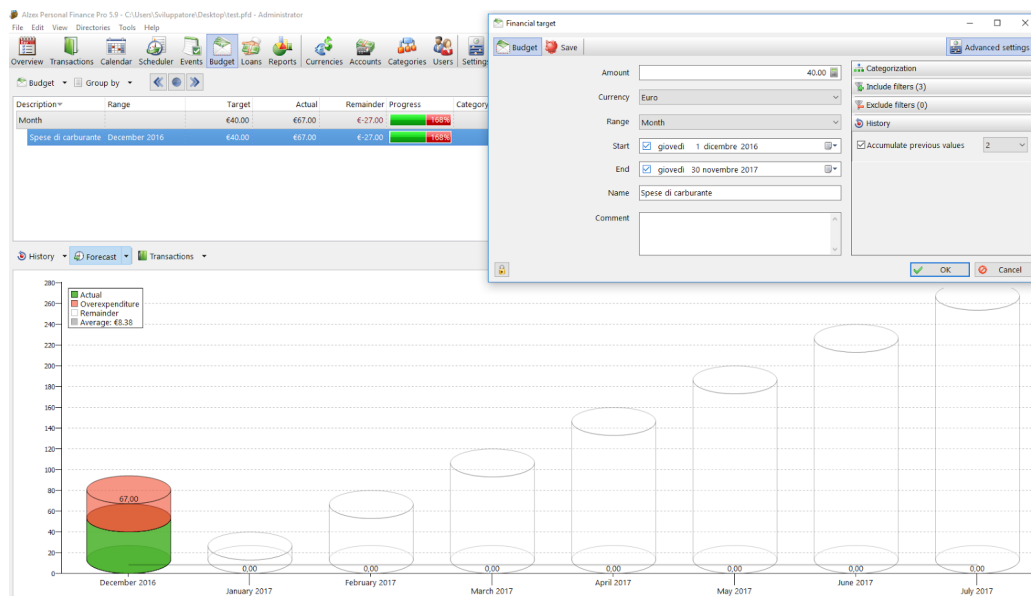

Jan '17 - 13€

Feb '17 - 53€

Mar '17 - 80€

Apr '17 - 80€

etc. etc.

Am I misunderstanding the way this option should work or is this a bug?

Regards,

Emanuele Di Blasi
